The Effect of Dryness and Fire on the Composition of Forests

The Effect of Dryness and Fire on the Composition of Forests in Central California

Forest Composition under Dry and Fire: Effect of Dryness and Fire

The characteristics of forest composition can be used to assess the sensitivity to history and the sensitivity to forest fires.

Characteristics of forest composition can be used to assess historical sensitivity and fire sensitivity of forests.

Forest composition characteristics can be used to evaluate historical sensitivity and fire sensitivity in forests.

Writefull for Overleaf – 用於 LaTeX 檔案的寫作建議

The screenshot displays the Overleaf web editor interface. On the left, a file explorer shows 'main.tex' and 'references.bib'. The main editor area shows LaTeX source code for a document titled 'Forest composition', dated 'April 2020'. The code includes package declarations for 'natbib' and 'graphicx', and a section titled 'Abstract'. The abstract text discusses the effect of dryness and fire on forest composition, mentioning variables like tree density, species diversity, and fire intensity. A 'Recheck' panel on the right provides a score of 8 for Grammar, 1 for Spelling, 3 for Vocabulary, 3 for Punctuation, and 2 for Style. The panel highlights several words in the abstract text with red boxes and arrows pointing to suggested alternatives: 'at' to 'on', 'quantity' to 'number', 'history' to 'a history', 'showed' to 'showed', 'forest' to 'forests', 'diversity' to 'diversity', 'huge' to 'large', 'great' to 'considerable' or 'substantial', and 'heterogeneity' to 'heterogeneity'. The 'Background' section also has a suggestion: 'forests' to 'forest'.

The screenshot shows the Writefull Cite interface. At the top, there is a search bar, a 'Compact View' toggle, a progress indicator at 0.70, and a 'GUIDE' button. The main content area is titled '6 MISSING CITATIONS'. It contains two numbered entries:

5 Gambling for money is a global phenomenon with a long history in human societies. Severe forms of gambling behaviour are diagnosed as gambling disorder, a persistent and recurrent maladaptive gambling behaviour, which leads to clinically significant impairment and distress [1–4]. The concept of problem gambling, including both a diagnosed gambling disorder and a subdiagnostic level of problematic gambling, has been estimated to have prevalence between 0.1 and 5.8% across continents. **MISSING CITATION? (0.983)** Altogether, problematic gambling is known to be associated with significant mental health problems [6, 7] and with an increased risk of suicidal behaviour [8] and suicide death [9].

6 Gambling disorder was the first behavioural addiction recognized as a disorder in the same category as alcohol- and drug-related conditions. **MISSING CITATION? (0.846)** In contrast to the relatively well-established concept of gambling as a phenomenon causing addiction [10], other nonsubstance-related conditions are discussed as potential separate diagnoses, including the concept of problematic video gaming or internet use. Here, the DSM-5 manual included internet gaming disorder as a "condition for further studies", and recently, this condition (named gaming disorder) was recognized as a disorder by the World Health Organization. **MISSING CITATION? (0.984)** Addiction to gaming has been described to be associated with consequences related to preoccupation, extensive time investment, lack of priority given to other activities, and even health-related harms [12]. Aside from the gaming disorder diagnosis, another tentative diagnosis, an internet addiction diagnosis, was under evaluation for inclusion into the DSM-5, but hitherto it has not been recognized as a diagnostic entity, although widely recognized as a clinical and public health issue [13–16].
